PROJECT DETAILS

PROJECT1   **Aug-2015 – march-2016**

Title   : MedicoForUs
Role   : Assistant Android Developer
Technologies   : Java, Xml and Android
Description   : The project "MedicoforUs" is a mobile application developed using Android
and java. This app helps patients to find the best doctors and hospitals, so that they can
make better healthcare decisions. It also enables communication between patients and
doctors seamlessly. A patient can view doctor's profile, fee structure, check his availability
and book appointments.
Responsibilities : Mainly Understanding existing project requirements, and I have
Created front-end using Android Layout and Assessed the UI design for technical feasibility.
Involved in designing, coding using java and worked with outside data source android APIs.

PROJECT 2   **Feb 2016 – Dec-2016**

Title   : Quick Info
Role   : Assistant Android Developer
Technologies   : Java, Xml and Android
Description   : The main intention of Quick Info is to get relevant answers to the questions
through our mobile contacts. We all have lot of contacts in our phone may be friends, relatives,
colleagues etc and your friends have other friends too it is like a chain process we can be a friend
of your friend and get many different answer as well for your questions Our app is based on
the assumption that the answer provided by people is more useful and important than the
answers Google gets by searching the web pages.
Responsibilities : Understanding existing project requirements.
Creating front-end using Android Layout and Assessed the UI design for technical feasibility.
Involved in designing, coding using core java and android APIs and Collaborated with the
application testers to debug the bugs and fixed them for better performance.

PROJECT 3   **Dec 2016 to Nov 2017**

Title   : E-Governance
Role   : Android Developer
Technologies   : Java, Xml and Android.
Description   : The project "E-Governance" is a mobile application developed using Android
and java. This application is about to solve the problems faced by citizens in a community. The
publics can post their problem and raise a complaint like for drainage problems, street lights, bin
collection etc. The citizens can communicate with the leader or municipality and share the
problems faced by them and make the issues to be solved.
Responsibilities : Understanding existing project requirements.
Creating front-end using Android Layout and Assessed the UI design for technical feasibility.
I have Involved in designing, coding using core java and android APIs and worked on bug fixing
and improving application performance.
