Project

1.Loan Assistant

- **Language (Core Java)**
- **In this project, we will build a consumer loan assistant. You input a loan balance and yearly interest rate. You then have two options: (1) enter the desired number of payments and the loan assistant computes the monthly payment, or (2) enter the desired monthly payment and the loan assistant determines the number of payments you will make. An analysis of your loan, including total of payments and interest paid is also provided.**

2. Electricity Billing System
- **Language(Core Java)**
- **Backend(MySql)**

- **Our project entitled "Electricity Billing System" aims to generate electricity bill with all the charges and penalty. Manual system that is employed is extremely laborious and quite inadequate. It only makes the process more easy and efficient. The aim of our project is to develop a system that is meant to partially computerize the work performed in the Electricity board like generating monthly electricity bill, record of consuming unit of energy, store record of the customer and previous unpaid record.**
